

PUGET SOUND MYCOLOGICAL SOCIETY
BULLETIN NO. 3 JUNE 1964

The June meeting will be at 8:00 PM, Monday, June 8. Dr. Stuntz will speak on rare, unusual, or special mushrooms of the area. An identification session is also planned (see next paragraph).

So far, we have very little information on experienced mushroom hunters for the projected field trip. It is our plan to have tables set up in the area adjacent to the Theater for the identification session. Plastic strawberry baskets will be available and also pre-printed labels. These labels will be left for the use of our new Curator, Al Crossetti, who will use them to make permanent records available. These labels will have blanks for collectors' names, date, location (approximate, natch!) and type of habitat, identification and edibility or otherwise.

Mushrooms reported collected during May include:

Helvella esculenta	State Road, Rainer	Elsie Barkman
H. gigas	Roslyn	Ted Clark
Boletus scaber	U. of W. campus	C. Volz
Stropharia semiglobata	Whidby I.-Ft. Casey	C. Volz
Pleurotas ostreatus	Alder, Vashon	Meriel Albright
Clitocybe multiceps (?)	Roslyn	Ted Clark
Hygrophorus marzaolus	Roslyn	Ben Woo
Boletus edulis	rumored Cle Elum	

Clavaria aurea, botrytis should be found, but have not been reported.

The University of Washington Pharmacology Department wants poisonous mushrooms, especially Amanita, Psilocybe, Inocybe, etc.

Membership is now over 225.

Your late (tardy, that is) editor,

C. Volz
